Connect your web browser based device to your home Wi-Fi network and access xLobby's xPad webserver

Control IR-RS232-Network UDP Devices

xLobby's powerful platform provides remote control capabilities using xLobbys xPad webserver a powerful HTML browser-based control system that works with multiple devices such as smart phones, iPads™, webtablets over lan, wi-fi or the internet. Virtually any device that supports Internet Explorer, Mozilla, Safari can access the xLobby xPad control interface. The xPad interface becomes a complete control system for your entire home, create and store powerful control event macros or Insert delays with mixed commands to automate multiple events. Use multiple interface devices on the same system for single device or multiple device control. Easily create and set up Infrared, RS232, and UDP network based devices to control A\V components, lighting, HVAC, security systems, the interface provides full two-way feedback. Create unlimited control pages with different style designs including backgrounds, buttons and text elements. Prebuilt design templates for common control screens to speedup your design time. Save and store custom designed user interfaces created with the xLobby skin editor for use on different projects. xPad works only with xLobby hardware running a licensed copy of xLobby.
